

# Fossil Power

Power for Today and Tomorrow

**T**he worldwide demand for clean, efficient energy has never been greater, and Bechtel is delivering it in a way no other company can match. All across the globe, from China and Mexico to Saudi Arabia and the United States, fossil fuel-fired power plants designed and built by Bechtel are generating electricity for homes and businesses, fueling the economies of the 21st century. In fact, we've developed, financed, designed, and built more megawatt capacity than anyone.

What makes Bechtel the number one choice for fossil power?

- Over half a century of experience designing and/or constructing more than 400 generating units of all types, fuels, and sizes, including massive coal, oil, and gas-fired plants that generate many hundreds of megawatts and can light entire cities.
- A reputation for building clean, cost-efficient power plants, and for bringing them in on time and within budget.
- Pace-setting technology utilizing the latest standards in plant design and construction.
- Innovative thinking and creative problem-solving that help keep projects on track.
- An on-the-job safety record second to none.

As one of the world's premier engineering, procurement, and construction companies, Bechtel offers one-stop shopping that can even include arranging the financing of a new power plant. And Bechtel's PowerLine® family of fourteen fully customizable plant designs makes it easier to choose—and faster to develop—a new power plant.

PowerLine designs, which incorporate the most advanced technologies in Bechtel's portfolio, are available for all major types of power plants, including combined cycle, pulverized coal, and fluidized bed.

The demand for energy will continue to increase as nations grow and develop. What won't change is Bechtel's commitment to bring energy to its customers in the most efficient, cost-effective way possible, by meeting new challenges and setting new standards.
