Changing the world for the better

Our customers are changing the world for the better. Their projects are delivering solutions to decarbonize development for a zero-carbon future. They are helping connect and enrich communities through rail, air, road, and digital networks. They are improving the resiliency of infrastructure to meet community needs as populations grow and rapid urbanization increases the pressure on public services. They provide responsible access to resources and protect nations and their citizens from evolving threats. They even reach for new frontiers in space.

Building the future

We admire our customers’ relentless search for innovative answers to the world’s greatest challenges so current and future generations can thrive. That is why everything we do is aligned to their goals. Since 1898, we have helped customers complete more than 25,000 energy, transport, digital, utilities, metals, minerals, and national security projects.

In 2019, these partnerships helped:

■ The Kosovo government expand trade in the Balkans by opening the country’s Route 6 motorway.
■ The U.S. Department of Defense to safely dismantle the last U.S. chemical weapons stockpile.
■ Alba add three percent to Bahrain’s GDP through a new aluminum smelter.
■ NASA design, build, test, and commission Mobile Launcher 2, the ground structure that will be used to launch the first woman and next man to the moon and beyond.
■ The Côte d’Ivoire government begin an infrastructure master plan that will promote sustainable economic growth and stability.
■ Cheniere to meet the growing demand for liquefied natural gas (LNG) in the United States.

Local opportunity

Our projects provide thousands of local jobs. We also offer skills training to equip people for new opportunities and career growth long after we leave. Every year, we purchase approximately $16 million in goods and services, much of which comes from small and disadvantaged businesses in our project communities.

What can we do for you?
